

Ideation Phase Empathize & Discover

Date	01 November 2023
Team ID	Team - 592796
Project Name	Alzheimer Disease Prediction
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Alzheimer Disease Prediction

Detection of Alzheimer's disease using deep learning is aimed at classifying the progression of the disease based on severity. Early detection of Alzheimer's disease is crucial as it can lead to earlier interventions, such as lifestyle changes and medications, which may help to slow down the progression of the disease. Early detection can also help families and caregivers to prepare for the future. By developing a shared understanding and empathy for people who are at risk of developing Alzheimer's disease, you can generate ideas, prioritize features, or discuss decisions that are more aligned with their needs and concerns.
